Medivators Online Hookup Guide Available

Medivators recently released an interactive online hookup guide to be used as the resource for finding hookup information for specific endoscope models reprocessed in Advantage, DSD/SSD and CER series Automated Endoscope Reprocessors. The online hookup guide is available to all Medivators customers worldwide and can be found at: www.minntech.com/medivators/HookupLookup. It provides the latest hookup assignments, directions for use (as available) and parameter set files (if applicable) for all Medivators hookups based on various user specified inputs.

All Medivators customers should use the online hookup guide to access hookup information. Please note that individual hookup application guides are no longer available and older versions should NOT be used for hookup selection.

The information contained in the online hookup guide is continuously reviewed and is subject to update or change without notice. Users may notice a difference in connector design or hook-up designations between the older printed versions and the new online hookup guide. If this occurs, there is no need for concern. A more commonly used connector or hook-up has been identified that offers the same or improved flow characteristics that, when used with their endoscope, will achieve optimal high level disinfection results. Users are advised to periodically check the online hookup guide to ensure that they have the most accurate and up-to-date information available.

If there are questions related to the contents of the online hookup guide, or if the information provided differs from what is expected based on previous experience, please contact Medivators Technical Services at 1-800-444-4729.

Endoscope reprocessing the way it should be™
